Objective

A highly motivated and detail-oriented Computer Science student with a strong interest in software development, mobile applications, and artificial intelligence. I aim to secure an opportunity where I can apply my technical knowledge in real-world scenarios and contribute to innovative projects. I possess hands-on experience in Android development, web application development, and API integration. I am passionate about building real-time applications and continuously enhancing my skills in emerging technologies.

Education

Bachelor of Information Technology, *Dr. N.G.P. Arts and Science College* 06/2024 – Present
Coimbatore

Currently pursuing my undergraduate degree with a focus on core areas such as software engineering, database management systems, and mobile application development. I am actively involved in developing academic and real-time projects to strengthen my practical knowledge.

Higher Secondary Education (12th Grade) - science, *Tirupur* 2013 – 2024

Completed higher secondary education with a focus on computer science fundamentals, mathematics, and logical problem-solving skills, which built a strong foundation for my technical career.

Technical Skills

Programming Languages

- Java: Used extensively for Android application development and object-oriented programming concepts.
- Python: Applied for backend development and AI-based logic implementation.
- JavaScript: Used for building dynamic web applications and API integration.

Mobile Application Development

- Android Studio: Developed multiple Android applications with user-friendly interfaces.
- Java (Android): Used for backend logic, activity management, and data handling in mobile apps.
- Flutter: Built cross-platform mobile applications with a single codebase, ensuring smooth UI/UX using widgets and responsive design.
- Dart (Flutter): Utilized Dart programming language for developing scalable and high-performance mobile applications.

Tools & Platforms

- Netlify: Version control and project collaboration.
- VS Code: Code development and debugging.
- Postman: API testing and validation.

Web Technologies

- HTML & CSS: Developed responsive and structured web interfaces.
- JavaScript: Implemented client-side logic, DOM manipulation, and real-time updates

Database & Backend

- Firebase: Implemented real-time database, authentication, and cloud storage features.
- MySQL: Designed and managed structured databases for applications.
- Node.js (Express.js): Built lightweight backend services and RESTful APIs to handle application logic and data processing.
- JSON: Used for structured data exchange between frontend and backend systems.
- REST APIs: Integrated and consumed third-party APIs for dynamic data fetching such as news updates and external services.

ADDITIONAL TECHNICAL SKILLS

- API Integration and handling real-time data
- Basic Artificial Intelligence (Rule-Based Systems)
- Debugging and Performance Optimization
- Firebase Authentication and Database Management
- Frontend and Backend Integration

Academic Projects

AI-Based Laboratory Test Interpretation Assistant 2025

Developed an intelligent web application designed to help users understand medical laboratory reports easily. The system analyzes uploaded reports and provides simplified interpretations of complex medical terms.

- Implemented rule-based AI logic to identify abnormal values such as unrealistic blood sugar or hemoglobin levels.
- Integrated logic to detect suspicious or manipulated reports based on medical inconsistencies.
- Designed a clean and user-friendly interface for easy interaction.
- Enhanced usability by providing explanations for medical parameters in simple language.

Technologies Used: Python (Flask), HTML, CSS, JavaScript

Live News Portal System (Real-Time Application) 2025

Developed a dynamic and real-time news portal capable of delivering live updates using external APIs.

- Integrated real-time news APIs to fetch and display the latest news automatically.
- Designed features such as flash news, category-wise updates, and date-wise filtering.
- Implemented an admin module to add and manage news content efficiently.
- Added AI-based daily summary generation for news content.
- Displayed real-time data such as gold rate, petrol price, and other dynamic information.

Technologies Used: JavaScript, Firebase, APIs

Mobile Shop Management Android Application 2025

Designed and developed an Android application to manage operations of a mobile shop efficiently.

- Developed modules for product inventory management and customer record tracking.
- Implemented billing functionality to handle sales transactions.
- Used Firebase for real-time data storage and synchronization.
- Focused on simple UI design to ensure ease of use for shop owners.

Technologies Used: Android Studio, Java, Firebase

Blood Count Based Hospital Recommendation System 2025

Designed and developed an intelligent application to analyze patient blood reports and recommend suitable hospitals based on medical conditions.

- Developed modules to process key blood parameters such as hemoglobin, white blood cells, and platelet count.
- Implemented rule-based logic to identify abnormal values and determine severity levels.
- Integrated backend functionality to match patient conditions with specialized hospitals.

Used database systems to store patient records and hospital information. Focused on simple and user-friendly interface for easy report input and recommendation display. Technologies Used: Android Studio / Python (Flask), Firebase / MySQL

Smart Interview Preparation Application 2025

Designed and developed a mobile application to help users prepare for interviews with smart practice and guidance features.

- Developed modules for interview question practice across different categories such as technical, HR, and aptitude.
- Implemented quiz-based functionality to evaluate user performance and track progress.
- Integrated AI-based or rule-based suggestions to provide feedback on answers.

Added features for resume tips and commonly asked interview questions. Used Firebase for storing user data and tracking performance history. Focused on clean and intuitive UI for better user experience. Technologies Used: Android Studio / Flutter, Java / Dart, Firebase

Safe Route Tracker Application 2025

Designed and developed a mobile application to help users find safe travel routes based on safety parameters and real-time data.

- Developed modules to track user location and suggest optimal routes with safety considerations.
- Integrated map services to display routes and navigation features.
- Implemented functionality to highlight safer paths based on predefined conditions or data inputs.
- Added emergency features such as quick alert or sharing live location with trusted contacts.
- Used Firebase for real-time data updates and user information management.

Focused on a simple and user-friendly interface for quick access during travel. Technologies Used: Android Studio / Flutter, Java / Dart, Firebase, Google Maps API

Snake Game Application 2025

Designed and developed a simple Snake Game application to demonstrate basic game development concepts and logic implementation.

- Implemented core game mechanics including snake movement, food generation, and collision detection.
- Developed score tracking system to display user performance.
- Handled game loop, user input controls, and increasing difficulty levels.
- Focused on smooth gameplay and responsive controls for better user experience.
- Designed a simple and interactive user interface for engaging gameplay.

Technologies Used: Java / Android Studio (or Flutter if used)

Hobbies

- Playing kabbadi.
- Learning new tech tools.
- Listening songs.

Certifications & Achievements

Full Stack Development Certification 2024 – 2025

Successfully completed a Full Stack Development course, gaining comprehensive knowledge in both frontend and backend technologies. The course enhanced my ability to build complete web applications from scratch.

- Developed skills in frontend technologies such as HTML, CSS, and JavaScript
- Gained backend development knowledge and database integration

- Built real-time web applications as part of hands-on training
- Strengthened understanding of full application development lifecycle

Hackathon Achievement (2nd Prize Winner) 2025

Secured 2nd Prize in a competitive hackathon by developing an innovative and functional project within a limited time frame.

- Collaborated effectively in a team environment
- Designed and implemented a real-time working solution
- Demonstrated problem-solving and critical thinking skills
- Successfully presented the project to judges

Web Development Competition – 1st Prize 2025

Achieved 1st Prize in a web development competition by creating a high-quality and user-friendly web application.

- Designed and developed a responsive website
- Focused on UI/UX and performance optimization
- Demonstrated strong frontend development skills

Delivered a fully functional and creative solution

Conference and Symposium Presentations

AI-Based Medical Report Analysis and Hospital Recommendation System, 01/12/2024
International Conference
Presented paper at an international conference.

Smart Interview Preparation System Using AI and Performance Analysis, 01/12/2024
Technical Paper Presentation

Mobile Shop Management System Using Android and Firebase, 01/12/2024
Project Paper Presentation

Safe Route Tracking System Using Real-Time Location and Safety Analysis, 01/12/2024
Technical Symposium Presentation

Strengths

- Strong analytical and problem-solving abilities
- Quick learner with adaptability to new technologies
- Ability to work on real-time and practical applications
- Good teamwork and communication skills
- Self-motivated and dedicated to continuous improvement
